DETAILED ACTION

Drawings

1. The drawings are objected to because reference numeral "2e' " is not shown.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency.

Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3677

3. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: at least one more "damper unit". The disclosure does not show any workable embodiment having only "a damper unit including a stator, a rotor". It is not clear how the claimed limitations are structurally and functionally related to one another to enable the claimed invention operable, with only one damper unit.

In claim 1, line 18, it cannot be understood what part "an outer opening part thereof" is referring to. Is that of the "hinge pin" or of the "support through-hole"?

Further, the term "fitted to..." is repeatedly used throughout the claim(s). The disclosure does not clearly define "fitted to". "fitted to" has multiple meanings. It is not clearly structurally what "fitted to" is intended to embrace in the claim.

Claim 1, lines 30-34 lack the structural relationship and therefore render the claim indefinite. As best as understood, the "connecting cylindrical part" is immovable relative to the "hinge pin". Merely placing a coil spring between these elements as claimed has no functional effect. The spring must be related to additional, movable element to generate biasing force. As it is claimed the invention raises uncertainty of operability.

Art Unit: 3677

In claim 4, it cannot be understood how "said stator" (a single stator) of claim 1 is received in "each of said receiving holes" (plurality of holes). Note similar errors regarding "said rotor" being received in both "said support through-hole" and "said support hole". Line 4 of the claim, "rotors"(plural) is newly introduced and therefore cannot be understood structurally. Note similar errors in claims 5 and 6.

In claim 5, line 2, it is not clear what "said connecting plates" are referring to and how the connecting plates are structurally related to base claims 4 and 1.

Allowable Subject Matter

4. Claims 1-6 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

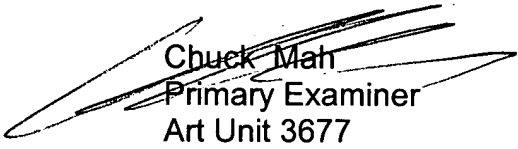

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
